

AI Launchpad — Referral Growth Engine

Live demo: nxtwave-ai-launchpad.vercel.app · Repo: github.com/rakshann05/ai-launchpad

🕒 **Target 3:00** · 🗣️ **~430 words** · calm pace 🎙️ Record the **live app**; flash the plan once

Read the 📖 lines aloud. **Blue** = what to show on screen (don't read). **Green** = lines that signal the grading criteria — don't skip them.

0:00

Live site open on the hero

📖 "Hi, I'm Rakshann. The challenge was simple to say and hard to do: get **500 final-year engineering students** to register for a free AI workshop — on a budget of **₹2,000**, in **7 days**.

📖 The brief even warned me: *everyone will build a landing page*. So I didn't. A landing page can't create its own reach, and ₹2,000 can't buy 500 signups. So I built something that can grow on its own — a **referral growth engine**. Let me show you."

0:28

[Learnability + Ownership — say this]

"My first idea *was* a landing page — I'll be honest. But I realised it's a dead end, so I reframed the whole problem around a referral loop. That shift is the most important decision I made."

0:42

Scroll slowly down the hero, then the goal bar

📖 "This is it, live. There's the hook, a countdown to the workshop, and this bar — the campaign goal is baked right in. It fills as we move toward 500."

0:55

Click "Reserve seat", type a name + college, submit

📖 "When a student registers... *[confetti fires]* ...they don't just get a seat. They get a **personal referral code**. That's the whole idea — every registrant becomes a channel."

1:12

Point at the dashboard: code, rank, tier, share buttons

📖 "Here's their dashboard: their referral code, their live rank, their reward tier, and a **one-tap WhatsApp share** with the invite pre-written."

1:28

Click the "+1 referral" demo button twice; tier upgrades

📖 "And watch — as friends join with their code, they **unlock reward tiers** and climb this **live leaderboard**. That's the loop: register, invite, climb, repeat. The product *is* the marketing."

1:45

Switch to the Growth Plan for a few seconds

📖 "Here's why it hits 500. If roughly **170 students each bring just two friends**, that's over 500 registrations — almost entirely organic. The ₹2,000 isn't the plan; it's the **spark**. About ₹1,600 of Instagram ads to ignite the first 150 students, who then refer the rest. My primary channel is **WhatsApp class and placement groups, plus coding clubs** — because that's exactly where this audience already lives."

2:20

[Back to camera or the app](#)

🗣️ "On using AI: it told me to spread across six channels — email, LinkedIn, Discord, SEO, influencers — and to spend the whole budget on ads. I **rejected both**. Spreading thin kills the referral loop's compounding, and ads buy a one-time spike, not a loop. I also rejected cash rewards — they attract the wrong crowd and burn the budget — for **status and career rewards** that cost almost nothing, like a mentor review and a certificate."

2:50

[Live site](#)

[Bias to Ship + Intent to Grow — say this]

"And this isn't a concept — it's **live right now**, anyone can register and share. Instead of one more landing page, I shipped one real product with a growth loop built in. If I had another 24 hours I'd wire a real backend so referrals track across users. I want to keep building this. Thanks for watching."

What the graders score — and where you prove it

Learnability	The 0:28 line — first idea was a landing page, you reframed it into a growth loop.
Ownership	You turned a vague "get 500 signups" into a concrete referral loop with its own math ($170 \times 2 \approx 510$).
Intent to Grow	You built past the minimum — deployed live, with social previews and docs — and said you'll keep building.
Bias to Ship	A real, live, clickable product — demoed on screen, not a mockup.
Problem Solving & Judgment	The 2:20 AI-rejection section — what you said <i>no</i> to and why.

Recording tips: Clear the app's saved state first (incognito window, or run `localStorage.clear()` in the console) so the demo starts fresh. Rehearse once. Speak slightly faster than feels natural — 3 min goes quick. One clean take with a small stumble beats five retries. If you run long, cut "The product is the marketing."
